Fisher® Type 95 Series Regulator The Industrial Strength Pressure Regulator

The 95 Series regulator is a compact, large capacity, self-operated pressure regulator. The unit is available in 1/4 through 2-inch sizes and is offered in several different end connection configurations. The 95 Series regulators are designed to handle pressures up to 600 psig and temperatures up to 650 degrees fahrenheit.

Typical manufacturing and process plants have hundreds of applications requiring industrial strength pressure regulators like the 95 series Fisher Regulator from Emerson Process Management. The 95 series regulators are used in industries such as refining, pulp and paper, chemical production, and food processing. Fisher has engineered the 95 pressure regulators to meet customer demands for precisely regulated pressures in steam, air, oxygen and other process gases, and to be used in applications such as plant air, instrument air, steam tracing and feedwater supply applications, just to name a few. Versatility, stability, in-line maintenance, and rugged construction have made Fisher's 95 series the pressure regulators of choice in thousands of installations around the world. **Features include:**

- Tight shutoff with Elastomer Seats
- Rugged Construction
- Special Service Capabilities
- Grafoil Gaskets
- Differential Pressure Capability
- Large Turndown Ratio
- Multiple End Connection Options
- Easy Maintenance
