## New Fisher® Sanitary Pressure Regulators SR5 and SR8

Emerson Process Management's Fisher® Type SR5 sanitary pressure regulator and Type SR8 sanitary back pressure regulator will help plant process operators maximize plant resources.

Fisher's new stainless steel sanitary regulators maintain precise pressure control and meet strict sanitary requirements necessary to operate in critical sanitary processes in pharmaceutical, biotechnology, food, cosmetics, chemical and other industries.

The Type SR5 and Type SR8 are designed for optimal performance in water-for-injection (WFI) and clean steam applications; and clean-in-place (CIP) and sanitize-in-place (SIP) systems.

**Enhanced Purity of Plant Products and Environment:** Each Fisher Sanitary Regulator has a 316L stainless steel body, wetted metal parts and a 316 stainless steel spring case. All wetted surfaces are mechanically polished to a 20 Ra Microinch finish and then electropolished. Diaphragms are available in 316L stainless steel, Viton with a TFE coating or EPDM. Metal or soft seats are available.

**Superior Service and Support:** With the most complete line of regulators in the industry, Fisher's worldwide distribution network includes an experienced sales and support team consisting of more than 2,000 technical experts available to serve you from 200 offices throughout the world.
