FOR IMMEDIATE RELEASE

New Product Announcement: Herron Valve Now Offers Complete Line of Gauges

Royersford, PA - (February, 2005) - [Herron Valve and Instrument](#), a local supplier of valve automation equipment and related services, announces the addition of the WIKA instrument line to its portfolio of valves and related valve automation supplies.

The addition of the WIKA line provides Herron customers with a wider selection of top quality equipment to choose from. A complete line of WIKA gauges, transmitters, indicators, diaphragm seals, thermometers and thermowells is available. The extensive WIKA gauge offering includes the Ultra High Purity, Bourdon Tube Pressure Gauges. The Bourdon Pressure Gauges are used for fluid mediums for semiconductor and other high purity applications that require both a high degree of accuracy and ultra clean wetted surfaces.

A wide range of sanitary diaphragm seals is available, including the Clamped Sanitary Chemical Seal. Combined with the Bourdon tube pressure gauges, the clamped sanitary seal is intended for hygienic pressure media, for use in the food & beverage and pharmaceutical industries. This seal has a process connection of 1 1/2" to 4", and works in suitable pressure ranges of 15PSI to 600PSI (1000PSI).

[WIKA Instrument Corporation](#) provides sophisticated solutions in the field of pressure and measuring technology. Producing over 30 million gauges, diaphragm seals, transmitters, and thermometers world-wide annually, WIKA has the most extensive product line in the industry. WIKA Instrument Corp. utilizes state-of-the-art manufacturing technology, and automated proprietary production equipment in its 210,000 square foot facility in Lawrenceville, GA. A logistical just-in-time system provides on time, accurate delivery to 110 full capability distributors nationwide.
